

COVID-19 and Household Financial Well-Being

Profile of the Philadelphia, PA Metro Division | December 2021

The views expressed here are those of the author and do not necessarily represent the views of the Federal Reserve Bank of Philadelphia or the Federal Reserve System.

Valeria Zeballos Doubinko, *Community Development and Regional Outreach Research Intern*¹

Credit serves as an important financial buffer for many households, enabling consumers to smooth out large expenses and compensate for income volatility. For those included in the credit economy,² debt utilization and related indicators provide an important measure of financial health. In the context of the COVID-19 pandemic, exploring recent trends in debt, delinquency, and credit scores offers insights into households' and communities' ability to weather economic shocks.

This report provides an overview of credit scores and debt patterns in the Philadelphia metro division (henceforth, the Philadelphia MD).³ To capture changes in credit conditions during the COVID-19 pandemic, this report highlights important trends occurring from the beginning of 2020 through the first quarter of 2021. To provide additional context on pre-pandemic conditions, data from 2019 are also included in figures and described below. The following sections provide key findings from the study period, followed by accompanying figures and tables in the appendix:

¹ Please contact Eileen Divringi at eileen.divringi@phil.frb.org for questions related to this report. The author would like to thank Alaina Barca for contributing the maps included in the appendix.

² According to the Consumer Financial Protection Bureau, roughly 1 in 10 American adults did not have any credit history with the three largest nationwide credit bureaus in 2010. For more information, see "[Data Point: Credit Invisibles](#)," Consumer Financial Protection Bureau's Office of Research, May 2015.

³ The Philadelphia MD is composed of Philadelphia County and Delaware County.

Philadelphia MD – General Overview

- Throughout the study period, the share of adults with a credit file and score did not vary significantly. In Q1 2019,⁴ the share of adults with a credit file and score was 85.6 percent, compared with 83.8 percent in Q1 2021. The share of adults with debt also did not vary significantly during the study period, with 72.8 percent of adults holding debt products in Q1 2019, compared with 73.9 percent in Q1 2021 ([Figure 1](#)).
- Among those with debt, the most widely held types in Q1 2021 were credit cards (78.3 percent), auto loans (37.5 percent), and mortgages (28.6 percent) ([Figure 2](#)). While average credit card balances decreased by 16.1 percent between Q1 2020 and Q1 2021, average total debt increased slightly to \$63,500, led by growth in mortgage and auto debt ([Table 1](#)).
- Financial health indicators improved between Q1 2020 and Q1 2021. For instance, the percentage of borrowers with severely delinquent debt declined from a high of 23.2 percent in Q1 2020 to 20.2 percent in Q1 2021 ([Figure 4](#)). The share of consumers⁵ with debt in collections also decreased below pre-pandemic levels, to 18.8 percent ([Figure 5](#)).

⁴ Each quarter corresponds to data reported by creditors in March (Q1), June (Q2), September (Q3), and December (Q4).

⁵ The term "consumers" refers to the full sample of individuals with a social security number and a credit file included in the CCP (see About the Data). Please note that the existence of a credit file does not necessarily imply active consumer credit use. Borrowers are consumers with debt greater than \$0 in at least one tradeline.

- To some extent, the decline in overall severe delinquency appears to be driven by a decrease in severe delinquency among student loan borrowers. Between Q1 2020 and Q1 2021, the share of borrowers with delinquent student loans declined 6.5 percentage points, a decrease of over one-third from the pre-pandemic baseline ([Table 2](#)). This decline corresponds with the enactment of an automatic federal student loan forbearance program,⁶ as well as other relief programs.
- Overall, the Philadelphia MD fared worse on indicators of financial health than the state of Pennsylvania as a whole. For instance, in Q1 2021, the share of borrowers in the Philadelphia MD with severely delinquent debt was over 1.5 times the statewide share ([Figure 4](#)). Moreover, Philadelphia MD consumers remained substantially more likely to have debt in collections, and credit card users were more likely to exceed 75 percent of their credit limit compare with the state overall ([Figures 5 and 6](#)).

In the Philadelphia MD, 39.1 percent of adults live in low- and moderate-income (LMI) neighborhoods, while 60.9 percent live in middle- and upper-income (MUI) neighborhoods ([Map 1](#)). The shares for neighborhoods that are majority people of color (POC) and majority non-Hispanic White are 50.5 percent and 49.5 percent, respectively ([Map 2](#)). Of the 267 majority-POC neighborhoods in the Philadelphia MD, 196 are also LMI. The next two sections explore credit trends in the Philadelphia MD by neighborhood income and race/ethnicity.

Neighborhood Income Categories

- Throughout the study period, borrowers in LMI neighborhoods had poorer access to credit than those in MUI neighborhoods. For instance, in Q1 2021, 76.7 percent of adults in LMI neighborhoods had a credit file and score, compared with 88.3 percent of adults in MUI neighborhoods ([Figure 7](#)).
- Some indicators suggested improving financial health in LMI neighborhoods. For instance, the share of consumers with prime credit scores in LMI neighborhoods rose to 38.2 percent, above pre-pandemic levels. Similarly, the percentage of borrowers with severely delinquent debt dropped

from a high of 35.6 percent in Q1 2020 to 30.6 percent Q1 2021 ([Figure 10](#)). Average credit card debt in LMI neighborhoods also decreased by 14.9 percent between Q1 2020 and Q1 2021 ([Table 3](#)).

- Despite some improvements in credit conditions in LMI neighborhoods, disparities by neighborhood income persisted throughout the study period, as illustrated by markedly higher delinquency rates for most types of debt and a greater likelihood of having debt in collections ([Table 4](#) and [Figure 11](#)).

Neighborhood Majority Race/Ethnicity

- There were significant disparities between the credit profiles of majority-White and majority-POC neighborhoods in the Philadelphia MD. For instance, 88.7 percent of adults in majority-White neighborhoods had a credit file and score, compared with only 78.7 percent of adults in majority-POC neighborhoods ([Figure 13](#)).
- Throughout the study period, there were some improvements in credit indicators in majority-POC neighborhoods. Notably, the share of consumers with prime credit scores increased above pre-pandemic levels, to 40.0 percent ([Figure 15](#)). Severe delinquency and high credit card utilization shares also declined below pre-pandemic levels ([Figures 16 and 18](#)). Nevertheless, disparities between majority-POC and majority-White neighborhoods did not substantially narrow.

It may seem counterintuitive to see stable or improving financial health indicators during the historic economic disruption caused by the COVID-19 pandemic and associated shutdowns. However, it is important to note that several major federal policies were implemented to aid pandemic recovery and support struggling Americans during this period. These included policies directly targeted toward stabilizing financially vulnerable households, including enhanced unemployment insurance benefits, stimulus payments, and expanded forbearance options, particularly for mortgage and student loan borrowers. Recent analyses indicate that some of these policies may have averted widespread economic distress, and even lifted many out of poverty.⁷ Whether the financial resiliency observed during our study period will persist as many of these programs begin to phase out remains to be seen.

6 Unlike traditional forbearance programs, which prevent borrowers from becoming more delinquent than they were at time of enrollment, most borrowers with delinquent federal student loan debt have been reported as current on payments during the forbearance period. See Andrew F. Haughwout, Donghoon Lee, Joelle Scally, and Wilbert van der Klaauw, “A Monthly Peek into Americans’ Credit During the COVID-19 Pandemic,” Federal Reserve Bank of New York, *Liberty Street Economics* (blog), August 6, 2020.

About the Data

This report uses data from the Federal Reserve Bank of New York Consumer Credit Panel/Equifax (CCP), which is derived from Equifax credit file data.⁸ Credit files do not include information on an individual consumer's income or race/ethnicity. However, consumers can be assigned to their neighborhood of residence (defined as census tracts). Using data from the FFIEC 2020 Census Flat File,⁹ we assign neighborhoods to income and majority race/ethnicity categories and break out findings for consumers in each category. The following neighborhood categories are included in this report:

Income:

- Low/moderate income (LMI): tract median family income (MFI) is less than 80 percent of the MFI in the associated MSA or metropolitan division
- Middle/upper income (MUI): tract MFI is greater than or equal to 80 percent of the MFI in the associated MSA or metropolitan division

Majority Race/Ethnicity:

- Majority White: over 50 percent of tract residents identify as both White and non-Hispanic
- Majority people of color (POC): over 50 percent of tract residents identify as a race other than White or as Hispanic or Latino

It is important to note that these categories reflect neighborhood-level characteristics. Some upper-income consumers live in lower-income neighborhoods (and vice versa), and some consumers of color live in majority-White neighborhoods (and vice versa).

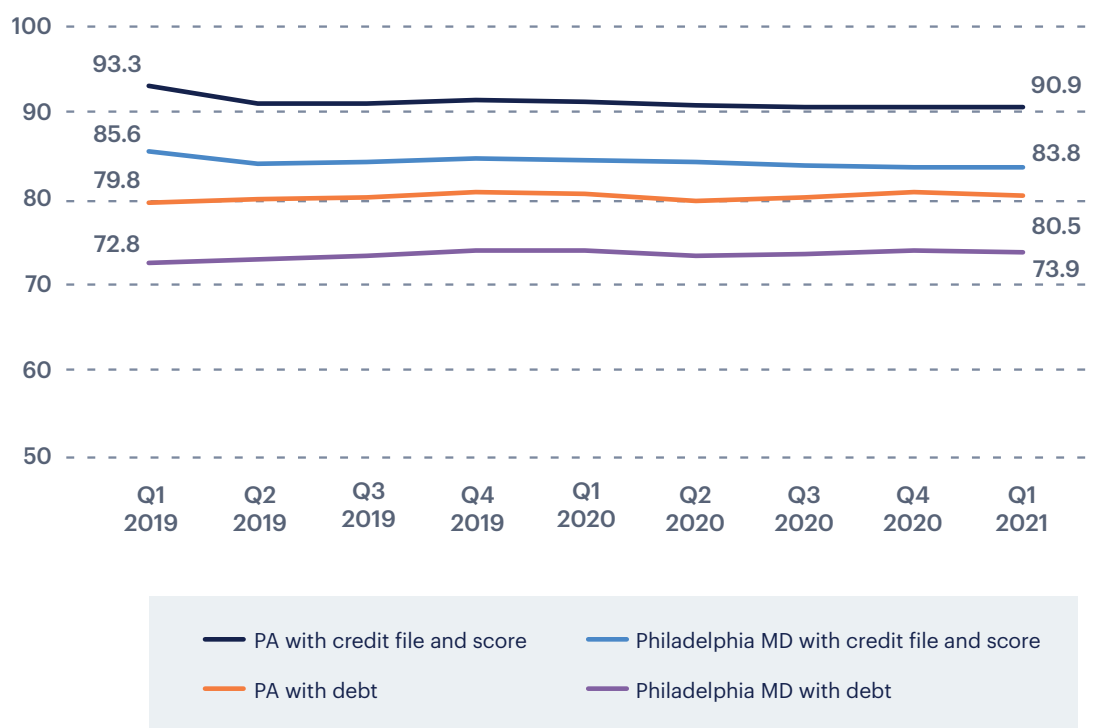

⁸ The CCP is an anonymous, nationally representative one-in-20 sample of all individuals in the United States with a Social Security number and credit file. For more information about this dataset, see Donghoon Lee and Wilbert van der Klaauw, “An Introduction to the FRBNY Consumer Credit Panel,” Staff Report 479, Federal Reserve Bank of New York, 2010.
