Measuring the Labor Market at the Onset of the COVID-19 Crisis: Evidence from Traditional and Non-Traditional Data

Marianne Bertrand
University of Chicago
July 30, 2020

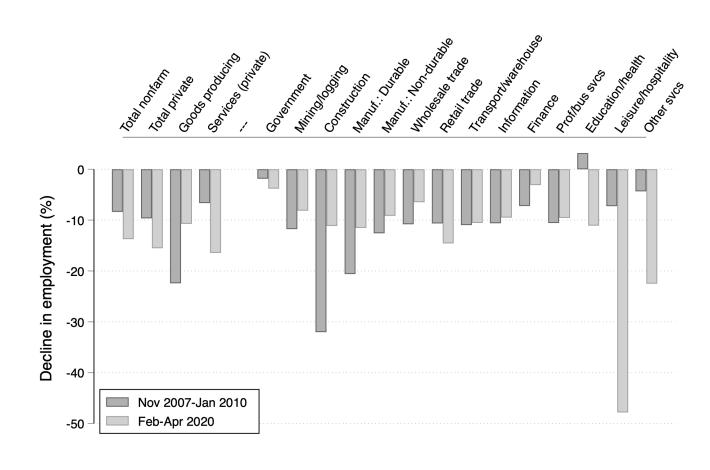

Goals

- Understand labor market decline at onset of COVID-19 recession
 - · Which sectors?
 - Timing
 - · Which workers?
 - Role of firms

Focus on small businesses

 Provide preliminary evidence on labor market effects of shutdown orders and economic interventions at onset

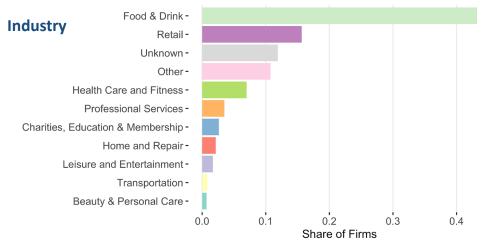

- Job losses in 2 months were 60% larger than the entirety of the Great Recession
- Industrial composition quite different — not the usual "mancession."
- High rates of temporary layoff, recall expectations.

RESEARCH FOR EQUITY IN RECOVERY

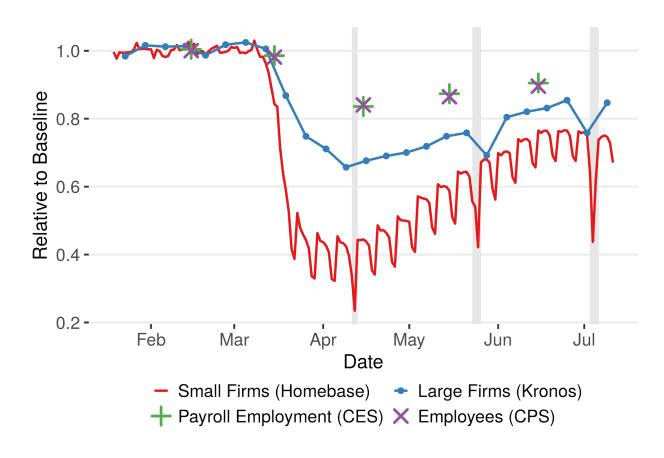

- Scheduling & time-clock service
- Primary small business clients restaurants, retail, salons, etc.
- Daily hours worked
- Follow firms and workers over time

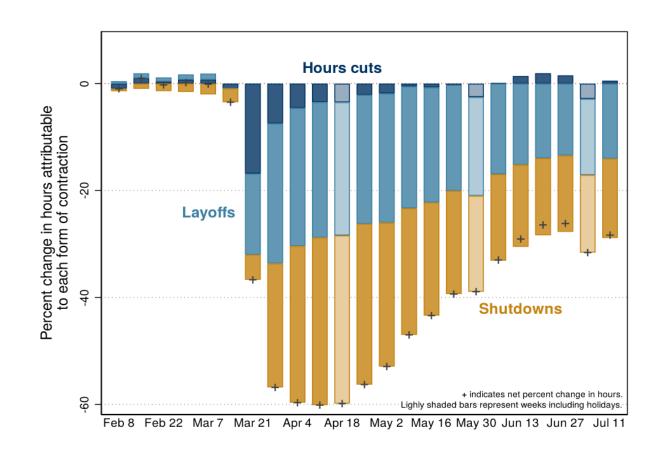

The collapse was extremely sudden

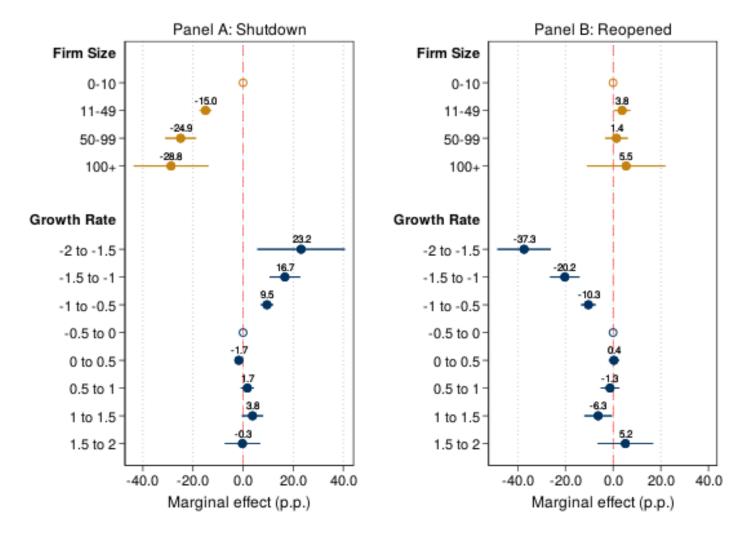

Total hours by day, (Jan. 19-Feb. 1 = 1.0)

Firm shut-downs and reopenings have played a RESEARCH FOR Large role

- This accounts for about half the lost hours.
- About 60% of the firms that closed have since reopened, averaging 3/3 of pre-shutdown scale.
- Nearly all hours at reopened firms have been from previous workers (but share is shrinking).

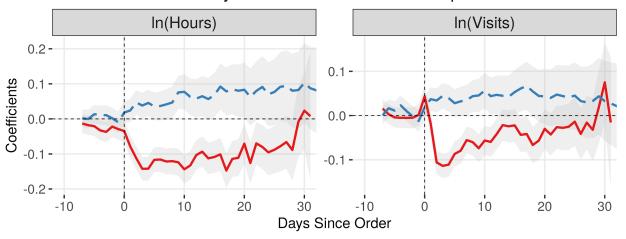

More disadvantaged workers more likely to be RESEARCH FOR Laid off, less likely to be rehired EQUITY IN RECOVERY

- Recall expectations are high:
 - 89% of unemployed joblosers in April were on temporary layoff
 - As many as 90% of new UI claimants in California (Hedin et al., 2020) expect to be recalled.

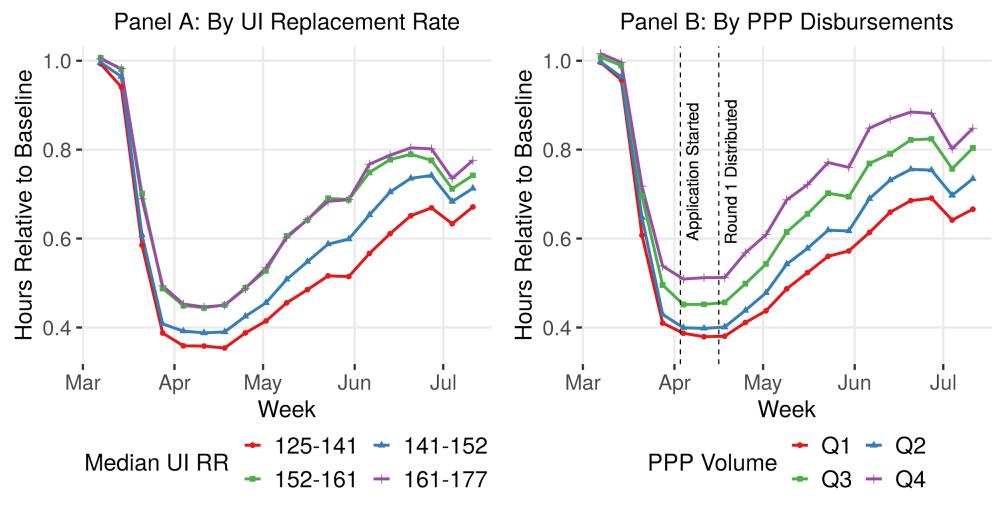

Shut-down and reopening orders play minor role in labor market changes

Panel A: Days Since Shut-Down and Reopen Orders

Panel B: Calendar Day Fixed-Effects

Conclusions

RESEARCH FOR EQUITY IN RECOVERY

- 1. The pandemic recession is different from recent recessions (so far):
 - a. Extremely fast onset and partial recovery
 - b. Led by decline in in-person services employment
 - c. Unemployed workers overwhelmingly expect to be recalled
- 2. More disadvantaged workers more likely to be laid off and less likely to be rehired (so far)
- 3. In short run, shut-down and reopening orders play relatively minor role in driving labor market decline and recovery; customers disappeared
- 4. Some indication that PPP loans sheltered the blow; no indication that UI replacement rates have slowed recovery (so far)

Small Business Financial Outcomes Before and During COVID-19

Research focus on small business cash flows

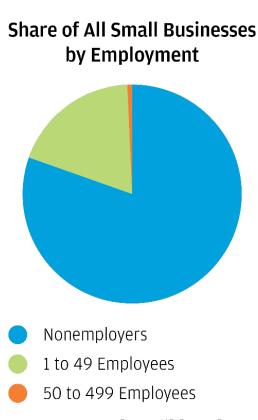

Disclaimer: All opinions are my own and not those of JPMorgan Chase.

- Nationwide, most small businesses are nonemployers or small employers
- Our research sample
 - Reflects national distribution
 - Based on deposit accounts (checking and savings)
 - Metropolitan areas
 - Owner race information from voter registration files of Florida, Georgia, and Louisiana

Source: US Census Bureau

Small business financial health

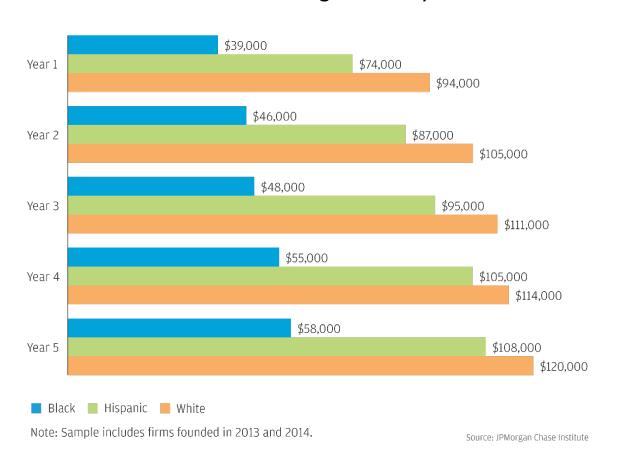

- Pre-pandemic (2013–2019)
 - Revenues
 - Profit margins
 - Cash liquidity
- During the pandemic (March–May 2020)
 - Focus on sectors severely impacted
 - Compared to same period in 2019
 - Cash balances
 - Revenues
 - Expenses

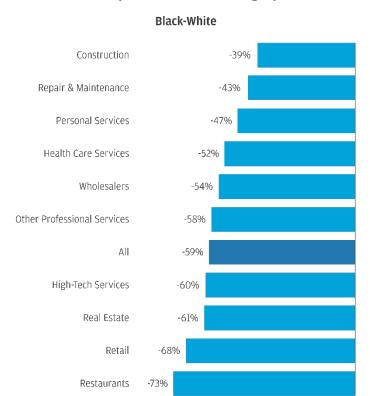

Pre-pandemic, Black- and Hispanic-owned businesses were smaller

RESEARCH FOR EQUITY IN RECOVERY

Median revenues during first five years

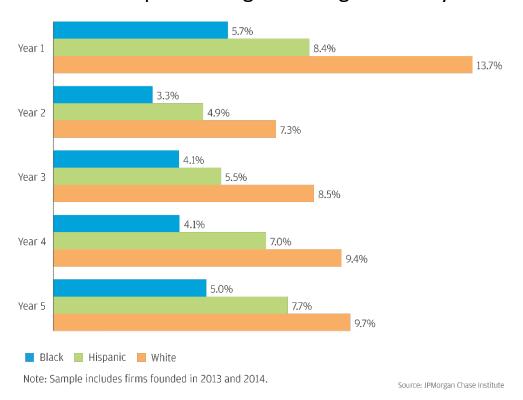

First-year revenue gap

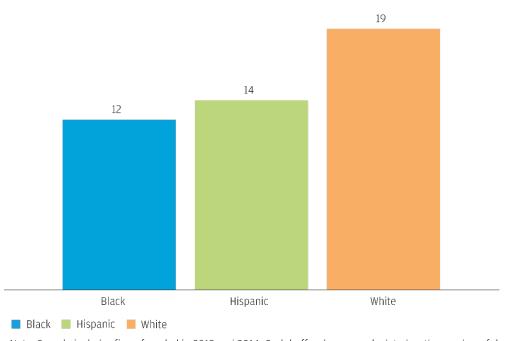

Note: Sample includes firms founded in 2013 and 2014.

Median profit margins during first five years

Median cash buffer days in year 1

Note: Sample includes firms founded in 2013 and 2014. Cash buffer days are calculated as the number of day during which a firm could cover its typical outflows in the event of a total disruption in revenues.

Conclusions and implications

- Cash balances have been bolstered with the help of COVID-19 relief efforts, but revenues remain materially lower than they were a year ago
- Small businesses in **some industry segments**, such as personal care services, will likely **have a longer path to recovery** if they manage to survive
- Equitable recovery is not just returning to pre-pandemic levels
 - Black- and Hispanic-owned businesses were smaller and more financially fragile before the pandemic
 - Include opportunities for Black- and Hispanic-owned firms to achieve the scale that would promote growth
