**Source:** Unless otherwise noted, all data are from Federal Financial Institutions Examination Council (FFIEC) Call Reports.

**Notes:** The data are adjusted for mergers. Quarterly percentage changes are compound annualized rates except where noted. Ratios are aggregates; that is, the numerators and denominators are summed across all banks in the group, then divided. Large U.S. banks are defined as banking organizations such as bank holding companies that are ranked in the top 100 in banking assets as of December 31, 2022, including assets of only their commercial bank subsidiaries. Large banks typically operate in multiple regions. The number of large banks may exceed 100 if during the calendar year some banking organizations’ assets grow larger than those of the 100th largest bank at the beginning of the year. A banking organization is an independent bank or all the banks within a highest-level bank holding company; however, banks less than five years old and special-purpose banks, such as credit card banks, are excluded. Small tristate banks are defined as those based in the tristate area that were not in the top 100 in assets as of December 31, 2022. Small U.S. banks are defined as those based outside the tristate area that were not in the top 100 in assets as of December 31, 2022, including assets of only their commercial bank subsidiaries. U.S. excludes tristate banks. The sample includes 104 small tristate banks, 3,638 small U.S. banks, and 99 large U.S. banks.
Recent Trends in Tristate and U.S. Banking Markets

The first quarter was a challenging time for the banking industry, including three large bank failures at the end of the quarter totaling nearly $450 million in assets. However, the failures were resolved through large bank purchases of the failed banks’ assets and liabilities, so the aggregate data were largely unaffected. Other than that, profitability increased at large banks but was flat at small banks. Net interest margins were strong, driven by strong real estate (RE) loan growth and deposit rates lagging rising loan rates, but falling securities prices reduced noninterest income and hampered profitability at small banks. Whether strong loan growth can continue is questionable, as commercial real estate (CRE) loans, which many small banks depend on, appear to be softening. Overall, loan quality remained good, but local banks have experienced quality problems in the last year. This was mainly due to the declining quality of commercial and industrial (C&I) loans; the quality of CRE loans declined at large banks as well. The decline in the quality of some loans was not reflected in net charge-offs. As a percentage of loan-loss provisions, charge-offs decreased.
