^{f/} Forecast.

Second quarter imports rose strongly with the pickup in the U.S. economy; the increase was about evenly split between oil and non-oil. The rise in non-oil imports was spread over a broad range of commodities with some of the larger increases coming in industrial supplies. Nearly all of the 14 per cent rise in industrial supplies was in volume; steel accounted for about one-third of that rise (mostly from the EEC); another large part of the increase was nonferrous metals. Foreign car imports were up slightly in the second quarter but imports, throughout the quarter, were less than the record sales.

The volume of oil imports increased by 5 per cent to 9.8 million barrels per day in the second quarter while the price rose 3 per cent to an average \$13.37 per barrel. A large part of the increase in petroleum imports in the second quarter was probably due to stock building in anticipation of the July 1 OPEC price increase. At the end of June 1977
