# Report to the FOMC on Economic Conditions and Monetary Policy

## Book A Economic and Financial Conditions: Current Situation and Outlook

June 13, 2012

---

---

Prepared for the Federal Open Market Committee  
by the staff of the Board of Governors of the Federal Reserve System

## Revisions to the Staff Projection since the Previous SEP

The FOMC published its most recent Survey of Economic Projections (SEP) following the previous FOMC meeting, in April. Thus, revisions to the staff economic projection since the April Tealbook are discussed in the main text. Nonetheless, for ease of reference, our projections for the SEP variables in the current and previous Tealbooks are shown in the table below.

**Staff Economic Projections Compared with the April Tealbook**

Variable	2012		2012	2013	2014	Longer run
	H1	H2				
Real GDP <sup>1</sup> April Tealbook	1.8 2.3	1.9 2.7	1.9 2.5	2.2 2.8	3.1 3.3	2.5 2.5
Unemployment rate <sup>2</sup> April Tealbook	8.2 8.2	8.2 8.0	8.2 8.0	8.0 7.7	7.7 7.4	5.2 5.2
PCE inflation <sup>1</sup> April Tealbook	1.5 2.0	.8 1.7	1.2 1.9	1.5 1.5	1.5 1.5	2.0 2.0
Core PCE inflation <sup>1</sup> April Tealbook	1.9 2.0	1.5 1.7	1.7 1.8	1.6 1.7	1.6 1.7	n.a. n.a.
Federal funds rate <sup>2</sup> April Tealbook	.15 .12	.13 .13	.13 .13	.13 .13	.50 1.20	4.25 4.25
Memo: Federal funds rate, end of period April Tealbook	.13 .13	.13 .13	.13 .13	.13 .13	.50 1.25	4.25 4.25

## State and Local Government Fiscal Conditions

The overall fiscal condition of state and local governments is slowly improving, although their budgets remain under significant strain. State government budgets appear to have stabilized more than local government budgets have, as state tax receipts—primarily from income and sales taxes—have continued to rise solidly with the economic recovery (the black line in the lower-left figure). As a result, only a few states reported mid-year budget shortfalls during fiscal year 2012 (which ends on June 30 in most states). In contrast, over the preceding three fiscal years, many states were forced to make sizable mid-year budget cuts. Nevertheless, nominal state tax revenue only recently returned to its 2008 peak, and reserve funds remain depleted in many states. At the local level (the red line in the lower-left figure), property taxes—the largest source of tax revenue for these governments—moved sideways in 2010 and 2011 as downward pressure from the lagged effects of the fall in real estate prices has been stemmed by increases in property tax rates. Local governments have also seen reductions in grants-in-aid from state governments as the states have passed a portion of their budget strain down to the local level. Finally, the stimulus grants-in-aid to both states and localities from the federal government were mostly phased out by the end of 2011.

States and localities have continued to trim their payrolls. However, as shown in the lower-right figure, the pace of job losses has eased significantly thus far this year after state and local employment had cumulatively declined by around 600,000 over the preceding three and a half years, a reduction equal to 3 percent of the sector's workforce. As employee compensation is the largest single expense for these governments, the slowing in job losses is consistent with easing budget pressure.

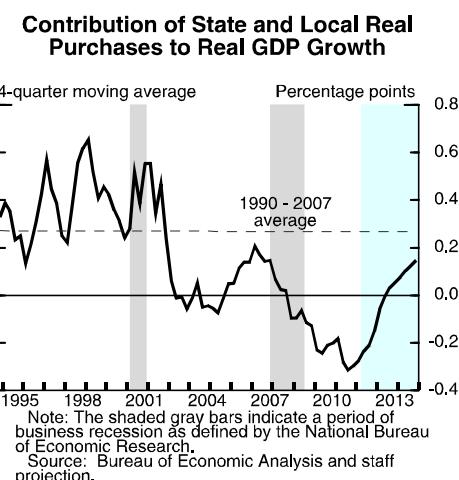

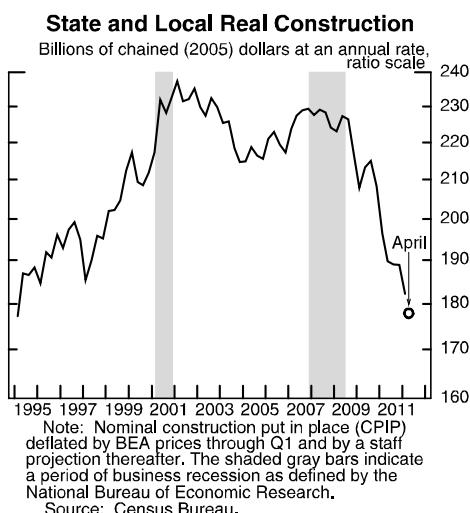

In contrast to the slowing pace of job cuts, state and local governments have continued to sharply decrease their capital expenditures. As shown in the lower-left figure on the next page, real construction outlays have fallen more than 20 percent from their 2007 peak and currently stand at their lowest levels since the mid-1990s. Capital budgets are exempt from the balanced budget requirements that typically restrict states and localities from issuing bonds to finance current

operations, and conditions in the municipal bond market are generally accommodative.<sup>1</sup> Thus, the pullback in construction spending likely does not reflect constraints on borrowing but, instead, tightness in operating budgets: New construction often requires an increase in operating expenditures once the project is complete (for example, a new school building not replacing an existing one requires hiring additional staff), and debt service payments are made out of operating budgets. Similarly, policymakers may be shoring up operating budgets by diverting taxes and fees typically earmarked for capital accounts.

Medicaid outlays, which account for nearly one-fourth of state government expenditures, rose rapidly in the aftermath of the recession as demand for the program surged (not shown). In recent quarters, though, these outlays have been subdued, likely attributable to improving economic conditions slowing the growth in caseloads and aggressive cost containment measures adopted by the states. This easing in the growth of Medicaid expenditures should help reduce the pressure on other areas of state budgets.<sup>2</sup>

Looking ahead, we expect state and local government spending to recover only gradually. Although state budgets should continue to be bolstered by rising tax revenues, local property tax revenue is projected to remain subdued for several more years. Furthermore, given the severity of the current fiscal strains, governments are likely to be cautious and emphasize replenishing depleted reserve funds before ramping up spending. As shown in the lower-right figure, we project that real purchases by state and local governments will be a moderate drag on real GDP growth this year, a roughly neutral factor in 2013, and provide only a modest boost in 2014.

<sup>1</sup> Consistent with the plunge in construction outlays, state and local debt has decelerated markedly since the start of the recession and posted a small decline in 2011.

<sup>2</sup> In the NIPA, state Medicaid expenditures are booked as personal transfer payments and Medicaid health services show up primarily in personal consumption expenditures. Thus, state Medicaid expenditures are not included in the contribution of state and local government real purchases to the growth in real GDP (shown in the lower-right figure).

Confidence interval						
FRB/US stochastic simulations	.1–.7	.1–1.6	.1–2.7	.1–3.6	.6–4.5	1.4–5.4

Note: Shocks underlying FRB/US stochastic simulations are randomly drawn from the 1969–2009 set of model equation residuals.

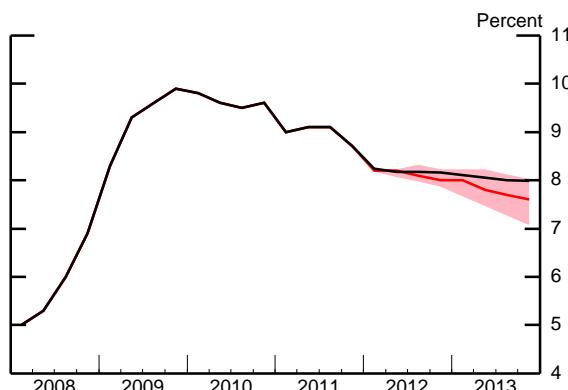

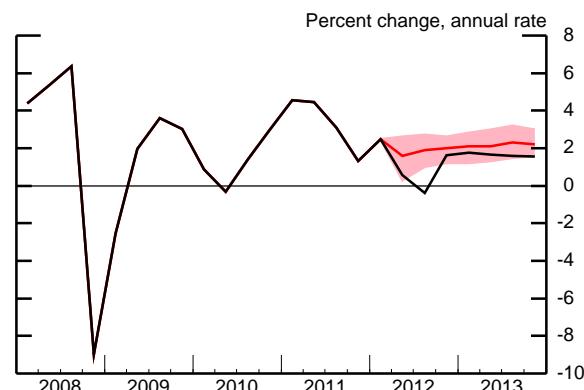

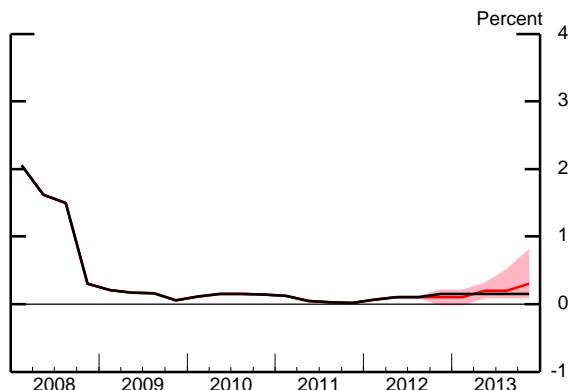

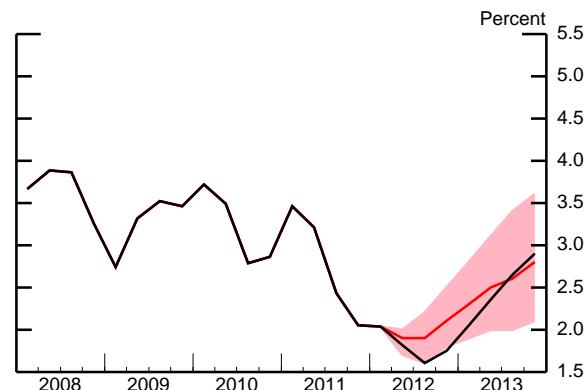

Intervals derived from Tealbook forecast errors are based on projections made from 1979–2009, except for PCE prices excluding food and energy, where the sample is 1981–2009.

... Not applicable. The Tealbook forecast horizon has typically extended about 2 years.

### Tealbook Forecast Compared with Blue Chip (Blue Chip survey released June 10, 2012)

**Real GDP****Real PCE**

Note: The shaded area represents the area between the Blue Chip top 10 and bottom 10 averages.

**Unemployment Rate****Consumer Price Index****Treasury Bill Rate****10-Year Treasury Yield**

Note: The yield is for on-the-run Treasury securities. Over the forecast period, the staff's projected yield is assumed to be 15 basis points below the off-the-run yield.

**Changes in GDP, Prices, and Unemployment**  
(Percent, annual rate except as noted)

1. Budget receipts, outlays, and surplus/deficit include corresponding social security (OASDI) categories. The OASDI surplus and the Postal Service surplus are excluded from the On-budget surplus and shown separately as off-budget, as classified under current law.

2. Other means of financing are checks issued less checks paid, accrued items, and changes in other financial assets and liabilities.

3. Gross saving is the current account surplus plus consumption of fixed capital of the general government as well as government enterprises.

4. HEB is gross saving less gross investment (NIPA) of the federal government in current dollars, with cyclically sensitive receipts and outlays adjusted to the staff's measure of potential output and the NAIRU. The sign on Change in HEB, as a percent of nominal potential GDP, is reversed. FI is the weighted difference of discretionary changes in federal spending and taxes in chained (2005) dollars, scaled by real GDP. The FI estimates are calendar year contributions to Q4/Q4 real GDP growth. Also, for FI and the change in HEB, positive values indicate aggregate demand stimulus. Quarterly figures for change in HEB and FI are not at annual rates.

a Actual.

Note: Data after 2012:Q1 are staff projections.

1. Average debt levels in the period (computed as the average of period-end debt positions) divided by nominal GDP.

2. Includes change in liabilities not shown in home mortgages and consumer credit.

3. Average debt levels in the period (computed as the average of period-end debt positions) divided by disposable personal income.

4. For corporations, excess of capital expenditures over U.S. internal funds.

5. NIPA state and local government saving plus consumption of fixed capital and net capital transfers.  
 n.s.a. Not seasonally adjusted.

Memo: Equilibrium and Actual Real Federal Funds Rate

	Current Tealbook	Previous Tealbook
Tealbook-consistent FRB/US $r^*$ estimate	-2.9	-2.5
Actual real federal funds rate	-1.8	-1.8

### Key Elements of the Staff Projection

#### GDP Gap

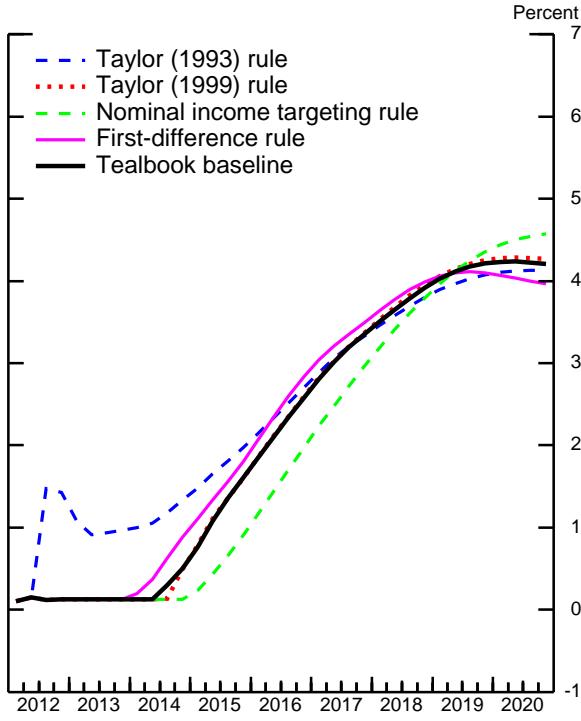

#### PCE Prices ex. Food and Energy

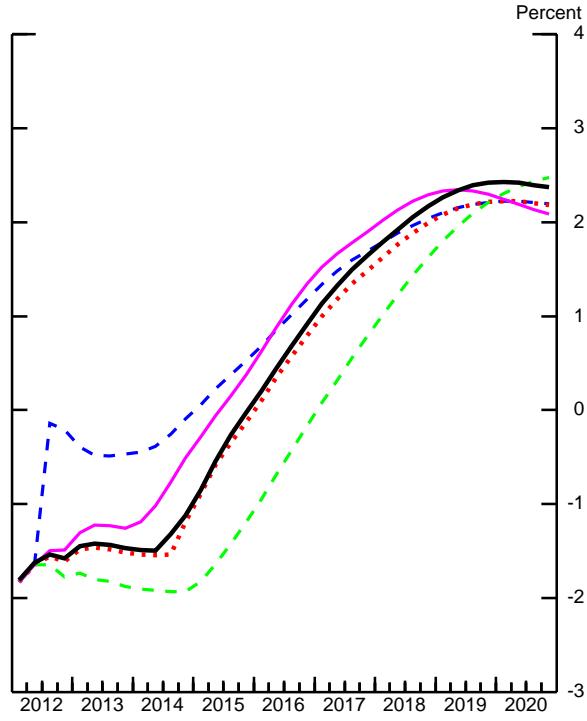

Note: For rules which have the lagged policy rate as a right-hand-side variable, the lines denoted "Previous Tealbook Outlook" report rule prescriptions based on the previous Tealbook's staff outlook, but jumping off from the average value for the policy rate thus far in the quarter.

## Policy Rule Simulations

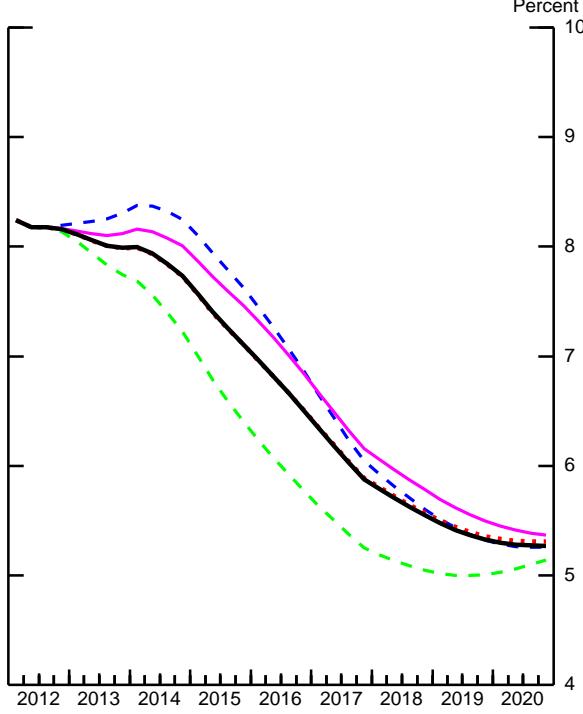

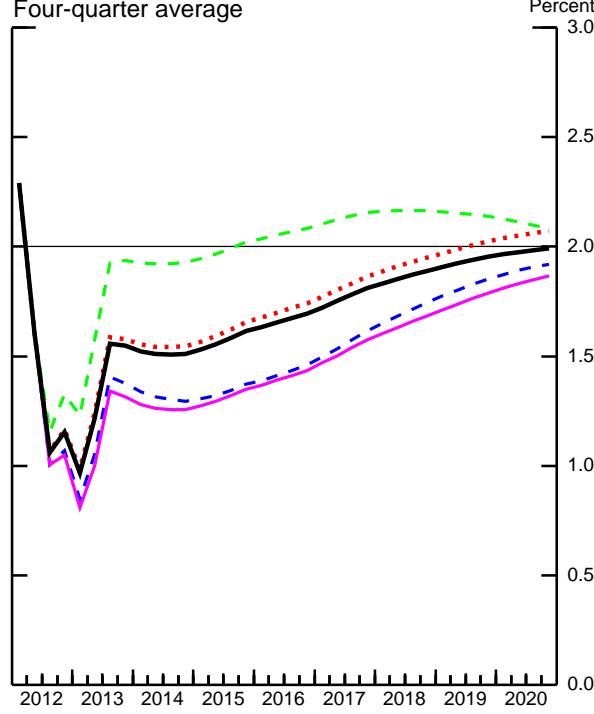

Nominal Federal Funds Rate

Real Federal Funds Rate

Unemployment Rate

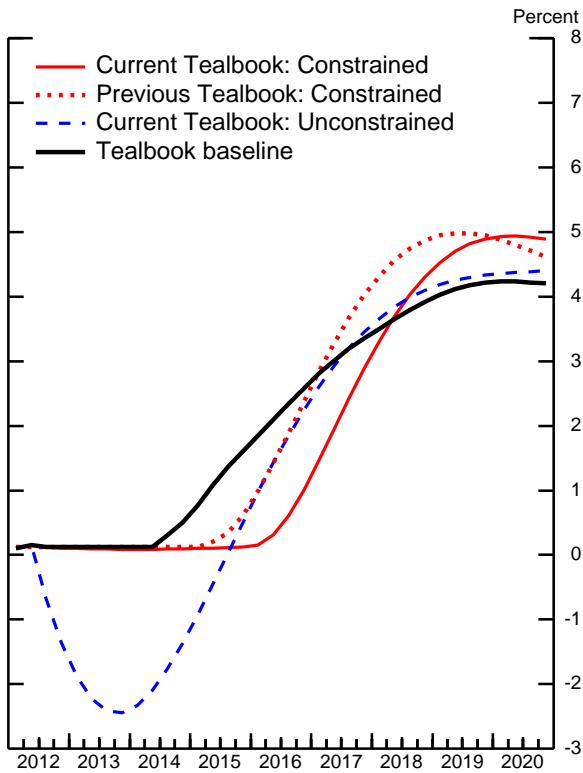

PCE Inflation  
Four-quarter average

Note: The policy rule simulations in this exhibit are based on rules that respond to core inflation. This choice of rule specification was made in light of the tendency for current and near-term core inflation rates to outperform headline inflation rates as predictors of the medium-term behavior of headline inflation.

## LONG-RUN PROJECTIONS OF THE BALANCE SHEET AND MONETARY BASE

The staff has prepared three scenarios for the Federal Reserve's balance sheet. The first scenario incorporates a continuation of the maturity extension program (MEP) that is consistent with Alternatives B and B'. The second scenario corresponds to Alternative A, incorporating a \$500 billion agency MBS purchase program as noted in paragraph 4 of the draft statement. This scenario is also consistent with the open-ended purchase program in paragraph 4' of that statement if purchases last, and are expected to last, for one year. The third scenario reflects Alternative C, in which the current MEP is completed at the end of this month and no additional balance sheet action is taken in the near term, with the federal funds rate rising above the current target range in late 2013. Projections under each scenario are based on assumptions about the trajectory of various components of the balance sheet. Details of these assumptions, as well as projections for each major component of the balance sheet, can be found in Explanatory Note D.

Alternatives

For the balance sheet scenario that corresponds to Alternatives B and B', the Committee is assumed to continue the MEP at its current pace through the end of 2012 instead of ending it at the end of this month as scheduled. The total amount of additional purchases under the extension of the MEP is \$267 billion. The expansion of the MEP changes the parameters of the program slightly; instead of selling the same dollar amount of securities with remaining maturities of three years or less, all Treasury securities in the
