

SURVEY OF PROFESSIONAL FORECASTERS

Release Date: November 16, 2020

FOURTH QUARTER 2020

Slower Near-Term Growth but Brighter Outlook for Employment

The outlook for real GDP growth in the next few quarters looks weaker now than it did three months ago, according to 37 forecasters surveyed by the Federal Reserve Bank of Philadelphia. The forecasters predict the economy will expand at an annual rate of 4.0 percent this quarter, lower than the prediction of 5.8 percent from the previous survey. On an annual-average over annual-average basis, the forecasters expect real GDP to decrease 3.5 percent this year but to recover and grow at an annual rate of between 2.1 percent to 4.0 percent over each of the following three years.

A downward revision to the projection for the unemployment rate accompanies the outlook for growth. The forecasters predict unemployment will decrease from a projected 7.0 percent this quarter to 5.8 percent in the fourth quarter of 2021. The prediction for the current-quarter unemployment rate is 2.5 percentage points lower than that of the last survey. On an annual-average basis, the panelists predict the unemployment rate will decline from a projected 8.2 percent in 2020 to 4.6 percent in 2023.

On the employment front, the forecasters expect job gains in the current quarter at a rate of 689,800 per month. The employment projections for the current and the following three quarters show upward revisions from those of the previous survey. The projections for the annual-average level of nonfarm payroll employment suggest job losses at a monthly rate of 718,000 in 2020 and job gains at a monthly rate of 321,600 in 2021. (These annual-average estimates are computed as the year-to-year change in the annual-average level of nonfarm payroll employment, converted to a monthly rate.)

The charts below provide some insight into the degree of uncertainty the forecasters have about their projections for the rate of growth in the annual-average level of real GDP. Each chart presents the forecasters' current and previous estimates of the probability that growth will fall into each of 11 ranges.

In 2020 and over the following three years, the charts show the panelists are raising their probability estimates at the higher levels of growth.

The forecasters' density projections for unemployment, shown below, shed light on uncertainty about the labor market over the next four years. Each chart presents the forecasters' current and previous estimates of the probability that unemployment will fall into each of 10 ranges.

In each of the four years shown in the charts, the forecasters are raising their probability estimates at the lower levels of unemployment.

Forecasters See Higher Inflation

The forecasters predict current-quarter headline CPI inflation will average 2.0 percent, up from 1.6 percent in the last survey. Headline PCE inflation for the current quarter will be 1.7 percent, up 0.5 percentage point from the survey of three months ago. Projections for all measures of CPI and PCE inflation at all other forecast horizons have mostly been revised upward, compared with those in the previous survey.

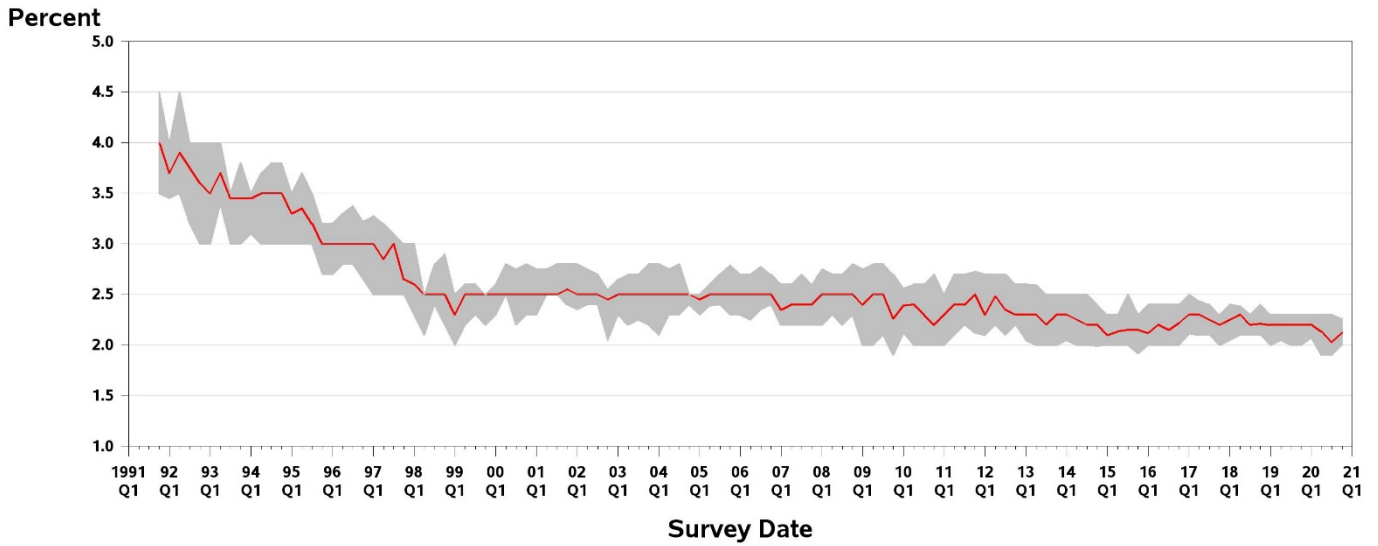

Over the next 10 years, 2020 to 2029, the forecasters expect headline CPI inflation to average 2.12 percent at an annual rate. The corresponding estimate for 10-year annual-average PCE inflation is 1.90 percent. Both 10-year annual-average inflation measures are slightly higher than their corresponding measures of three months ago.

The charts below show the median projections (the red line) and the associated interquartile ranges (gray areas around the red line) for the projections for 10-year annual-average CPI and PCE inflation. The charts highlight slightly higher projections for the long-term inflation rate, compared with those of the last survey.

Projections for the 10-Year Annual-Average Rate of CPI Inflation (Median and Interquartile Range)

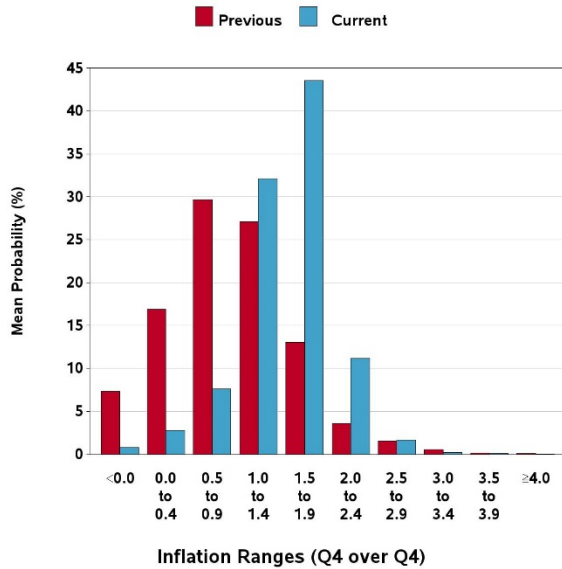

Projections for the 10-Year Annual-Average Rate of PCE Inflation (Median and Interquartile Range)

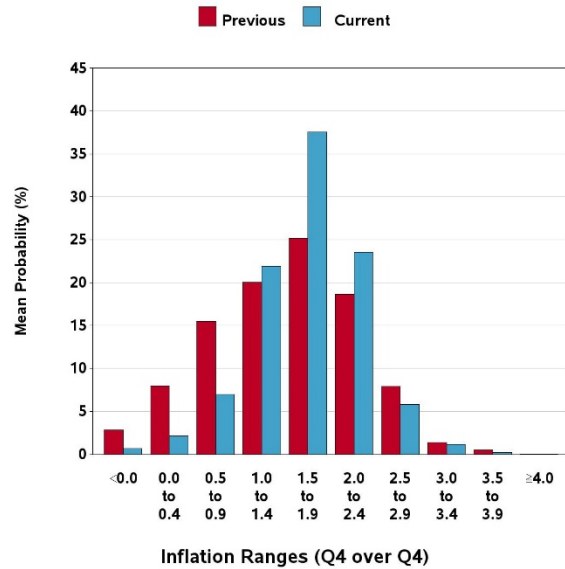

The figures below show the probabilities that the forecasters are assigning to each of 10 possible ranges for fourth-quarter over fourth-quarter core PCE inflation in 2020 and 2021. For both years, the forecasters see the most likely core PCE inflation range is that from 1.5 to 1.9 percent.

Mean Probabilities for Core PCE Inflation in 2021

Lower Risk of a Negative Current Quarter

The forecasters have revised downward the chance of a contraction in real GDP in three of the next four quarters. For the current quarter, the forecasters predict a 16.4 percent chance of negative quarter-over-quarter growth, down from 20.4 percent in the survey of three months ago.

BAA is the rate on Moody's Baa corporate bonds.

The historical values for interest rate spreads for Moody's Aaa and Baa rates are proprietary and therefore not available to the general public.

Each interest rate spread is computed as the median value of the forecasters' spreads. These median values may differ from those computed as the difference between the median values of each interest rate in the spread.
