

## **Errata: Survey of Professional Forecasters (Last Updated: November 19, 2015)**

The pages below show the changes made to correct errors to the individual observations in the SPF data set. Errors in the individual observations will affect the mean values for each survey date and may also affect the median values. When we post corrections to the individual observations, we also post the updated files of mean and median responses. The variable names listed below are defined in the documentation listed on our web page at the URL:

<http://www.philadelphiafed.org/research-and-data/real-time-center/survey-of-professional-forecasters/spf-documentation.pdf>

In the Excel files posted on our web page, a missing value is coded as #N/A.

## **These Changes Were Posted On: November 1, 2006**

In September 2006, the Philadelphia Fed discovered in its historical data set for the Survey of Professional Forecasters a number of suspect observations for the probability-range variables. These are the variables that we name: PRGDP1 – PRGDP20 (ranges for output growth) and PRPGDP1 – PRPGDP20 (ranges for output inflation). In a number of surveys prior to that of 1991 Q4, the relevant variables do not sum to 100 for some individuals. Please note that these errors affect the data files of individual responses as well as the file of mean probability responses, as given below:

1. The two worksheets (PRGDP and PRPGDP) in the mean probability data file  
<http://www.philadelphiafed.org/files/spf/prob.xls>
2. The two worksheets (PRGDP and PRPGDP) in the individual forecasts data file  
<http://www.philadelphiafed.org/files/spf/micro1.xls>
3. The two worksheets (PRGDP and PRPGDP) in the individual forecasts data file  
<http://www.philadelphiafed.org/files/spf/micro2.xls>
4. The two worksheets (PRGDP and PRPGDP) in the individual forecasts data file  
<http://www.philadelphiafed.org/files/spf/micro3.xls>

We have detected no problems with these variables in the surveys from 1991 Q4 to the present.<sup>1</sup> Tables 1 - 3 provide summary information on the observations affected. Each table identifies the survey year and quarter and the individual (ID) for which we have detected an error in the probability ranges. In these tables, PRGDPYR1 and PRGDPYR2 show the sum of the relevant probability ranges for output growth associated with the current (1) and following (2) years. The variables PRPGDPYR1 and PRPGDPYR2 show the same for output price inflation. (Note that in early surveys, only ranges for one year were included in the questionnaire.) Each of these should sum to 100. A problem is indicated when the value does not sum to 100. As you can see from the tables, sometimes the ranges sum to a value that is close to 100 but not close enough to be attributable to a rounding error. In other cases, the sum is zero, suggesting that the data were entered incorrectly.

**Corrections to the Data.** The surveys prior to 1991 Q4 were conducted by the NBER/ASA, and the Philadelphia Fed has no hard-copy historical records to aid in correcting the observations. We therefore decided on the following methodology:

- When the sum of the probability-range variables for a particular year deviates at least five percentage points (+/- 5% or more) from 100, we set all variables for that year to missing. Table 4 lists the original (incorrect) responses, identified by the survey date and the ID of the panelist. The table provides the original responses (“Old Value”) and it notes that these responses were changed to missing values (“New Value”) in the data set.

---

<sup>1</sup> However, we describe below a related problem in the surveys of 1981Q3 and 2006Q3 in which a few responses were entered into the data set as missing values when they should have been entered as zero. We also describe a correction made to the responses of individual 992 in the survey of 1973 Q4 affecting the probability-range variable PRPGDP15.

- When the sum deviates from 100 by less than five percentage points, we leave the observation unchanged.

We adopted this methodology for the following reason. For small deviations from 100, researchers may wish to make minor adjustments to the responses, by distributing the discrepancy among the probability bins, in order to preserve the observation. For large deviations, it is probably best to eliminate the observation.

**These Changes Were Posted On: November 1, 2006**

For the observations on the probability-range variables listed below, we discovered a few cases in which the entry for a bin was entered as missing rather than as zero. The table below identifies the survey date, probability bin, and individual (ID) for these cases. For a definition of the probability variables, see the survey's documentation at the URL:

<http://www.philadelphiafed.org/research-and-data/real-time-center/survey-of-professional-forecasters/spf-documentation.pdf>

	<b>Survey Date</b>	<b>Variable</b>	<b>ID</b>	<b>Old Value</b>	<b>New Value</b>
1	1981Q3	PRPGDP6	13	Missing	0
2	1981Q3	PRPGDP12	13	Missing	0
3	2006Q3	PRGDP7	448	Missing	0
4	2006Q3	PRGDP14	65	Missing	0

**This Observation Was Deleted On: November 1, 2006**

The observation for panelist 992 in the survey of 1973 Q4 contained missing values for all variables except the probability-range variable PRPGDP15, which had a value of zero. We deleted this individual's observations for all variables from the 1973 Q4 survey, as shown in the table below.

<b>Survey Date</b>	<b>Variable</b>	<b>ID</b>
1973Q4	All variables	992

## **Fixed an Error in MeanGrowth.xls: July 8, 2015**

**Summary:** In July 2015, we discovered an error in the file for the growth of the mean forecasts for the levels of SPF variables. The error was in the file labeled MeanGrowth.xls. The error affected no other files, even other files having growth rates. Note also that the error in no way affected the data that have been reported in our survey newsletters: The survey newsletters have correct data in all tables.

**Details:** Beginning with the files that we released for the fourth-quarter survey of 2014 (published on November 17, 2014), we incorrectly reported data in the file labeled MeanGrowth.xls. The file was supposed to report the growth rates of the mean forecasts for levels of SPF variables, but it instead reported growth rates for the median forecasts for levels.

**Corrections:** On July 8, 2015, we fixed the problem in MeanGrowth.xls and posted the correction on our website.
